Project Title: Integrated hospital management system with patient records, doctor scheduling and billing

Module Photographs:

```
--- Hospital Management System ---
1. Add Patient
2. View Patients
3. Search Patient
4. Update Patient
5. Delete Patient
6. Add Doctor
7. View Doctors
8. Schedule Appointment
9. Generate Bill
10. Exit
Enter choice: 1
Enter Patient ID: 01
Enter Name: HARISHA
Enter Age: 20
Enter Disease: FEVER
Patient added successfully!
```

Project Description: My contribution was **Module 1 – Patient Records Management**, where I developed functions to add, view, search, update, and delete patient records using C programming.

The project titled **Integrated Hospital Management System** is developed to manage important hospital activities such as patient records, doctor scheduling, appointments, and billing in a centralized system. My contribution to this project was **Module 1 – Patient Records Management**. This module is responsible for maintaining complete digital information about patients, including patient ID, name, age, disease, contact details, and other required information. I worked on implementing the patient record functions such as **Add Patient, View Patient, Search Patient, Update Patient, and Delete Patient** using C programming. I also used structures to organize and store patient information efficiently. The module helps healthcare professionals retrieve patient records easily and reduces manual paperwork and errors. Through my contribution, the patient information can be managed in a systematic, accessible, and efficient manner.
